- Pen Mill Infant School

Integrated Data Needs Ltd (IDN) are a respected provider of Wireless Networks into the Education and Public Sector. We understand that every site has a different requirement, whether this is providing a fast throughput and coverage to your individual site, or isolated areas within your site.

By having a Wireless Network you can have a truly mobile ICT Suite where students and teachers will have the freedom that can help encourage collaboration, engage pupils, and enable an interactive learning environment.

Since the ratification of wireless N technology, wireless networking has been accepted as an enterprise standard and a realistic comparison to a hard wired network. Having a poorly designed and installed wireless network further leads to pupils and teacher dissatisfaction, with teaching and learning disrupted rather than enhanced.

Technology in schools has to work first time every time - that's why when you engage with IDN we take a professional and systematic approach to your requirement. We will take the time to visit your school for an initial free of charge consultation to discuss your requirements and carry out a full site survey so that we can design a bespoke solution that will fit your needs.

IDN make the visit easy for the school – we understand that there is a different level of knowledge at every site. Our consultants will explain a number of options where possible, how the install will look and give best advice for future growth. Following the visit you will usually receive your quotation/proposal in 48hrs. For larger scale projects this can take a little longer but you will be advised of the timescale

### What wireless services do we provide?

IDN provide a large range of services to a varied customer base:

- Full Wireless Infrastructure design
- Wireless on demand (WOD Service)
- Voice over Wi-Fi
- Asset Tracking
- Wireless Laptop Trolleys
- Digital Signage over Wi-Fi

### Why choose IDN?

IDN has been providing reliable Wireless Networks to its clients for over 8 years. IDN have a truly vendor independent approach ensuring that the solution is not compromised. IDN only supply and install Enterprise Class products (at Education Pricing) ensuring that the wireless network has a positive impact on your teaching and learning but is also secure. IDN don't cut corners - we present the correct solutions to your schools.

We complete the full job from start to finish with our own staff, no sub-contractors – by using this converged approach throughout the different business units in IDN it lowers the cost of the project but also lowers the risk and causes less stress by having a single point of contact and dedicated account manager. Of course, when implementing a new technology you also want the peace of mind that you will have the support of a local company if problems occur. With every Wireless Network Proposal we offer 12, 24 or 36 month support contracts.

We have built our company's reputation on word of mouth and are known for our honest and customer-focused approach. It is because of this approach that we have been Somerset Local Authority's preferred networking and audio visual contractor for the past 10 years.
